The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (USP 5,956,521) in view of Beck (USP 5,826,101).

Details of the rejection have already been set forth in the last Office action. The details are incorporated herein by reference thereto.

In the communication filed on July 21, 2003, Applicants amended the independent claims to read that the key information is contained in the title or body of the message. Applicants failed to point out support of the amendment in the disclosure (37 CFR 1.75d1 and 1.83a). Applicants further fail to provide any arguments as to why this feature is patentable distinct over the applied arts (37CFR 1.111c). The court held that simply pointing out what a claim requires with no attempt to point out how the claims patentably distinguish over the prior art does not amount to a separate argument for patentability. In re Nielson, 816 F.2d 1567, 2 USPQ 1525 (Fed. Cir.1987). As to the newly inserted feature, it is well known that electronic messages transmitted via a network are in packets. It is further well known that packets contain fields such as header field and message field etc. See claim 5 of USP 6,304,914 (Deo et al) for example. Which field the key information is actually in is a matter of design choice. No patentable distinction is seen. For example, in the instant invention, the key information can be in the title field or in the body field. The applied reference (Wang) has key information (priority code, lines 45-55 of column 9) in the header field which contains a destination address and a title.
